

PHYSICIAN-DIRECTED DRUG TESTING

Care Beyond the Clinic

MOUD Monitoring Programs

Physician-directed drug testing and treatment support, delivered wherever your patients are.

One connected workflow for treatment

LabbMD is a physician-directed drug testing and treatment-support service built on the [LabbMD](#) platform, purpose-built for treatment centers and prescribing physicians.

It brings e-prescribing, remote drug testing, patient onboarding, fee collection, and record retention into a single place. **You direct the care. Labb runs everything behind it.**

E-prescribing

Remote self-read
monitoring

Case management

WHY IT'S DIFFERENT

It is the only workflow that brings e-prescribing, remote self-read monitoring, and case management together — where standalone prescribing tools and generic case-management platforms cannot.

You set the fee. LabbMD runs everything else.

Extend monitoring to your telehealth and at-home patients so care does not stop at the clinic door. Fewer no-shows, more consistent adherence data, and none of the operational burden.

Set your own patient fee. LabbMD collects it and wires the funds directly to your account.

No stocking kits, no shipping, no credit card handling, and no separate HIPAA software to buy.

Labb onboards your patients, runs the testing ([UA:13A panel](#)), and reads every result.

Records retained for 7 years, with a provider dashboard that keeps every result in one view.

Keep in-office testing where you want it. Use LabbMD for telehealth, between-visit, and overflow patients — with the same documentation standard.

Testing that respects your privacy and fits your life

Stay on track with your treatment without a trip to the clinic every time.

Test from home. Self-collect, photograph your cup and your face together, and submit.

A trained person reads your result. Never AI alone.

Your fee is set by your doctor.

Need a provider? Reach out to us directly and we make in-state referrals to participating LabbMD doctors.

Four steps, start to record

1

Enroll

The provider adds the patient. LabbMD handles everything else.

2

Test

The patient self-collects at home and submits a photo of the cup and their face together.

3

Read

Trained LabbMD personnel read and audit every result.

4

Retain

Results flow to the provider dashboard, and records are retained for 7 years.

Proof, not promises

Human-audited result interpretation, never AI alone.

Every result reviewed on a **HIPAA-grade platform**.

Built by a team with both — a rare combination. **point-of-care diagnostic device and software platform experience**

Purpose-built for MOUD monitoring: a compliant result is positive for buprenorphine and negative for everything else. Supportive by design, never punitive.

CLIA-waived kit

HUMAN-READ

Never AI alone

7 YEARS

Record retention

Three steps to get started

Onboarding is built for busy practices. You handle three quick steps — the Labb team runs everything after that.

1

Sign the agreement

Review and e-sign the LabbMD service agreement and BAA — a few minutes, fully online.

2

Add banking details & fee

Enter your practice's deposit account and set your patient fee. Your portion is paid out to you automatically.

3

Upload the patient roster

Send us your patient list. Labb onboards each one and invites them directly — no manual entry.

The Labb team takes it from there

We enroll every patient, ship the kits, read the results, and post them to your dashboard — no added work for your staff.

Bring monitoring to every patient — in the clinic or at home.

PROVIDERS

Start directing testing on LabbMD with zero setup burden.

PATIENTS

Ask about at-home testing, or request an in-state referral.
